

Plane Geometry: Summer Assignment

Welcome to BMC Durfee High School –

We hope that you are looking forward to your four years at our school. In order to help prepare you for your high school mathematics career, we have created a summer assignment. This assignment is designed to help review factoring, solving equations, simplifying radicals, the Pythagorean Theorem, solving proportions, linear equations, and systems of equations. It will be collected on the first day of school, and be counted towards the term 1 grade. In order to receive full credit, you must show work for each problem. You will also be tested on the material covered in the assignment.

You will see that most of the questions provide a hint or a key search word. If you are having difficulties solving a problem, then use the key word to search the internet, notes, or online texts (see below). If there are still any concepts that you have not yet seen, or concepts that you cannot remember, please do not hesitate to email: kdaniels@fallriverschools.org or de SILVA@fallriverschools.org.

We look forward to meeting you in the fall!
