

DETAIL MAP - 4832095.2S

- Target Property
- Sites at elevations higher than or equal to the target property
- Sites at elevations lower than the target property
- Manufactured Gas Plants
- Sensitive Receptors
- National Priority List Sites
- Dept. Defense Sites
- Indian Reservations BIA
- Pipelines
- 100-year flood zone
- 500-year flood zone
- National Wetland Inventory
- State Wetlands
- Areas of Critical Environmental Concern

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MA-EPICS - Massachusetts Environmental Protection Integrated Computer System

AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Actions:

Action Type: Response Action Outcome - RAO
Action Status: Revised Statement or Transmittal Received
Action Date: 11/15/2001
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Activity and Use Limitation
Action Status: Level I - Technical Screen Audit
Action Date: 12/10/2001
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Activity and Use Limitation
Action Status: Confirmatory AUL received
Action Date: 3/19/2012
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Activity and Use Limitation
Action Status: Level II - Audit Inspection
Action Date: 4/6/2012
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Immediate Response Action
Action Status: Completion Statement Received
Action Date: 6/27/1996
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Activity and Use Limitation
Action Status: Level II - Audit Inspection
Action Date: 6/27/2005
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Release Disposition
Action Status: Reportable Release under MGL 21E
Action Date: 8/30/1995
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Immediate Response Action
Action Status: Completion Statement Received
Action Date: 11/10/1994
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: RNF
Action Status: Reportable Release under MGL 21E
Action Date: 11/10/1994
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Response Action Outcome - RAO
Action Status: Revised Statement or Transmittal Received
Action Date: 11/15/2001
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Immediate Response Action
Action Status: Written Plan Received
Action Date: 11/9/1995
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Activity and Use Limitation
Action Status: Level I - Technical Screen Audit
Action Date: 12/10/2001
Response Action Outcome: A permanent solution has been achieved. Contamination has not been reduced to background and an Activity and use Limitation (AUL) has been implemented. Contamination is located at a depth of >15 feet but evaluation has determined that it is not feasible to reduce it.

Action Type: Response Action Outcome - RAO
Action Status: Level I - Technical Screen Audit
Action Date: 12/10/2001

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 08/05/2016	Source: EPA
Date Data Arrived at EDR: 10/05/2016	Telephone: N/A
Date Made Active in Reports: 01/06/2017	Last EDR Contact: 01/05/2017
Number of Days to Update: 93	Next Scheduled EDR Contact: 04/17/2017
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 08/05/2016	Source: EPA
Date Data Arrived at EDR: 10/05/2016	Telephone: N/A
Date Made Active in Reports: 01/06/2017	Last EDR Contact: 01/05/2017

	Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 09/14/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 10/04/2016	Telephone: 703-603-8704
Date Made Active in Reports: 10/21/2016	Last EDR Contact: 01/05/2017
Number of Days to Update: 17	Next Scheduled EDR Contact: 04/17/2017
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/10/2016	Source: EPA
Date Data Arrived at EDR: 10/20/2016	Telephone: 800-424-9346
Date Made Active in Reports: 01/06/2017	Last EDR Contact: 01/06/2017
Number of Days to Update: 78	Next Scheduled EDR Contact: 05/01/2017
	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/10/2016	Source: EPA
Date Data Arrived at EDR: 10/20/2016	Telephone: 800-424-9346
Date Made Active in Reports: 01/06/2017	Last EDR Contact: 01/06/2017
Number of Days to Update: 78	Next Scheduled EDR Contact: 05/01/2017
	Data Release Frequency: Quarterly

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 09/12/2016	Source: EPA
Date Data Arrived at EDR: 09/28/2016	Telephone: 800-424-9346
Date Made Active in Reports: 01/06/2017	Last EDR Contact: 12/28/2016
Number of Days to Update: 100	Next Scheduled EDR Contact: 04/10/2017
	Data Release Frequency: Quarterly

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/12/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/28/2016	Telephone: (888) 372-7341
Date Made Active in Reports: 01/06/2017	Last EDR Contact: 12/28/2016
Number of Days to Update: 100	Next Scheduled EDR Contact: 04/10/2017
	Data Release Frequency: Quarterly

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/12/2016	Source: Environmental Protection Agency

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/12/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/28/2016	Telephone: (888) 372-7341

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/12/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/28/2016	Telephone: (888) 372-7341

State and tribal Brownfields sites

BROWNFIELDS: Completed Brownfields Covenants Listing

Under Massachusetts law, M.G.L. c. 21E is the statute that governs the cleanup of releases of oil and/or hazardous material to the environment. The Brownfields Act of 1998 amended M.G.L. c. 21E by establishing significant liability relief and financial incentives to spur the redevelopment of brownfields, while ensuring that the Commonwealth's environmental standards are met. Most brownfields are redeveloped with the benefit of liability protections that operate automatically under M.G.L. c. 21E.

Date of Government Version: 12/31/2015	Source: Office of the Attorney General

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
25005C0334G	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
25005C0332G	FEMA FIRM Flood data
25005C0351F	FEMA FIRM Flood data
25005C0353F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
FALL RIVER	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Precambrian
System:	Precambrian
Series:	Z gneissic rocks
Code:	Zg (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Plutonic and Intrusive Rocks

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Udorthents

Soil Surface Texture: variable

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	variable	Not reported	Not reported	Max: 141.14 Min: 0.42	Max: Min:
2	5 inches	59 inches	variable	Not reported	Not reported	Max: 141.14 Min: 0.42	Max: Min:

Soil Map ID: 3

Soil Component Name: Paxton

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Not reported	Not reported	Max: 14.11 Min: 4.23	Max: 6 Min: 4.5
2	7 inches	22 inches	fine sandy loam	Not reported	Not reported	Max: 14.11 Min: 4.23	Max: 6 Min: 4.5
3	22 inches	59 inches	gravelly sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 6 Min: 4.5

Soil Map ID: 4

Soil Component Name: Paxton

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	fine sandy loam	Not reported	Not reported	Max: 14.11 Min: 4.23	Max: 6 Min: 4.5
2	7 inches	22 inches	fine sandy loam	Not reported	Not reported	Max: 14.11 Min: 4.23	Max: 6 Min: 4.5
3	22 inches	59 inches	gravelly sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 6 Min: 4.5

Soil Map ID: 5

Soil Component Name: Woodbridge

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Not reported	Not reported	Max: 14.11 Min: 4.23	Max: 6 Min: 4.5
2	9 inches	27 inches	fine sandy loam	Not reported	Not reported	Max: 14.11 Min: 4.23	Max: 6 Min: 4.5

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
3	27 inches	59 inches	gravelly fine sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 6 Min: 4.5

Soil Map ID: 6

Soil Component Name: Whitman

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

2	5 inches	14 inches	gravelly fine sandy loam	Not reported	Not reported	Max: 42.34 Min: 4.23	Max: 6.5 Min: 4.5
3	14 inches	59 inches	gravelly fine sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 6.5 Min: 4.5

Soil Map ID: 7

Soil Component Name: Woodbridge

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 61 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Not reported	Not reported	Max: 14.11 Min: 4.23	Max: 6 Min: 4.5
2	9 inches	27 inches	fine sandy loam	Not reported	Not reported	Max: 14.11 Min: 4.23	Max: 6 Min: 4.5
3	27 inches	59 inches	gravelly fine sandy loam	Not reported	Not reported	Max: 1.41 Min: 0	Max: 6 Min: 4.5

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: MassDEP

Telephone: 617-292-5907

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Massachusetts Geographic Information System (MassGIS) Datalayers

Source: Executive Office of Environmental Affairs

Public Water Supply Database: The Public Water Supply datalayer contains the locations of public community surface and groundwater supply sources and public non-community supply sources as defined in 310 CMR 22.00.

OTHER STATE DATABASE INFORMATION

Areas of Critical Environmental Concern Datalayer: The Areas of Critical Environmental Concern (ACEC) datalayer shows the location of areas that have been designated ACECs by the Secretary of Environmental Affairs. ACEC designation requires greater environmental review of certain kinds of proposed development under state jurisdiction within the ACEC boundaries. The ACEC Program is administered by the Department of Environmental Management (DEM) on behalf of the Secretary of Environmental Affairs. The Massachusetts Coastal Zone Management (MCZM) Office managed the original Coastal ACEC Program from 1978 to 1993, and continues to play a key role in monitoring coastal ACECs. Procedures for ACEC designation and the general policies governing the effects of designation are contained in the ACEC regulations (301 CMR 12.00). The ACEC datalayer has been compiled by MCZM and DEM and includes both coastal and inland areas.

EPA Designated Sole Source Aquifers Datalayer: The Sole Source Aquifer datalayer was compiled by the Department of Environmental Protection (DEP) Division of Water Supply (DWS). Seven Sole Source Aquifers have been designated by the US Environmental Protection Agency (EPA) for Massachusetts. A Sole Source Aquifer (SSA) is an aquifer designated by US EPA as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for that area and for which there are no reasonably available alternative sources should that aquifer become contaminated. The aquifers were defined by a EPA hydrogeologist.

Aquifers Datalayer: MassGIS produced an aquifer datalayer composed of 20 individual panels, generally based on the boundaries of the major drainage basins. Areas of high and medium yield were mapped. This datalayer includes polygon attribute coding to help in the identification of areas in which cleanup of hazardous waste sites must meet drinking water standards, as defined in the Massachusetts Contingency Plan (MCP) (310 CMR 40.00000).

Non-Potential Drinking Water Source Areas: Non-Potential Drinking Water Source Areas (NPDWSA) are regulatory in nature, representing one of many considerations used in determining the standards to which ground water must be cleaned in the event of a release of oil or hazardous material. NPDWSAs are not based on existing water quality and do not indicate poor ambient conditions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

DEP Approved Zone IIs Datalayer: The Department of Environmental Protection (DEP) approved Zone IIs datalayer was compiled by the DEP Division of Water Supply (DWS). The database contains 281 approved Zone IIs statewide. As stated in 310 CMR 22.02, a Zone II is "that area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation.) It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries. In all cases, Zone IIs shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a groundwater flow divide, a contact with till or bedrock, or a recharge boundary)." These data are used in association with the Public Water Supplies datalayer. The following describes certain unique features of this association.

- Any proposed new well which will pump at least 100,000 gallons per day must have a Zone II delineation completed and approved by DEP prior to the well coming on line.
- Additionally, a new source may not be on-line yet, but other, older wells may fall within its Zone II boundary.
- Further, existing wells must have a Zone II delineated as a condition of receiving a water withdrawal permit under the Water Management Act.

Chief Roger St. Martin
City Fire Marshal

21-E Site Assessment Report

Fall River Fire Department
Office of the Fire Chief

Date: 1/30/2017

To: Whom It May Concern,

In follow up to your request for copies of all current and historic petroleum related records for the properties located at:

**BMC Durfee High School
360 Elsbree St.
Fall River, MA 02721**

Our records do not indicate the permitting of USTs, ASTs, or Chemical/Flammable Storage Tanks at this location. In addition there are no records of any releases of hazardous chemicals or oil related products associated with this property.

If you have any questions feel free to contact me at anytime.

Jason Campbell

Fire Prevention Bureau

APPENDIX K

Site Photography

SITE PHOTOGRAPHY

Figure 1: View of B.M.C. Durfee High School main entrance that faces Elsbree Street. The image captures the variances in gradient with the catch basin not fully utilized as standing water is visible within two to three feet of the drain (Photo taken January 26, 2017).

Figure 2: View of the two boilers underneath the swimming pool that supply Building 4. Due to the pressure release valve, water vapor is typically discharged into this room and can be identified by the standing water on the floor, no drainage was visible (Photo taken January 26, 2017).

Figure 3: Housing for the two generators on Site intended for emergency purposes. The housing is part of the vocational section of the school (Photo taken January 26, 2017).

Figure 4: Three remaining boilers that supply the Buildings 1-3. These boilers are relatively new and were installed three years ago and are maintained and monitored by ENE Systems Inc. based out of Canton, MA (Photo taken January 26, 2017).

Figure 5: Drainage in the same room as Figure 4, which leads to the City's drainage and combined sewer (Photo taken January 26, 2017).

Figure 6: Changes in gradient on the property created areas of saturated soil with poor drainage. In this instance the standing water was in the proximity of two drains but was unable to capture the runoff (Photo taken January 26, 2017).

Figure 7: Storage closet in the wood/machine shop to store paints, thinners, varnish, and other cleaning supplies (Photo taken January 26, 2017).

Figure 8: Two elevators were on site. This elevator machine room was at the main entrance of the building. No visible hydraulic fluid in the room or evidence of spills in either machine room was observed (Photo taken January 26, 2017).

Figure 9: Drains located on the west side of the school. No evidence of standing water due to the steep gradient in this area of the Site (Photo taken January 26, 2017).

Figure 10: Two of four transformers on Site. Due to the gradient both transformers reside in low-lying areas with poor drainage (Photo taken January 26, 2017).

Figure 11: Highest point of elevation adjacent to the Site (i.e., approximately 220 feet MSL). The change in elevation across the Site from the southwest to the northeast is approximately 65-75 feet (Photo taken January 26, 2017).

Figure 12: Mammoth Inc. HVAC units on the roof of the high school building. The current piping system once contained glycol, but now utilizes water. Due to cycling up in concentration, frequent corrosion issues occur due to lack of corrosion control measures of the City water entering the system (Photo taken January 26, 2017).

Figure 13: View of the chiller system on Site from the roof. The system was installed in 2002-2003 (Photo taken January 26, 2017).

Figure 14: Sprinkler System on Site. Minimal systems were in place at the school, with the larger rooms such as auditoriums, cafeterias, and lunch room taking priority for fire flow systems (Photo taken January 26, 2017).

APPENDIX L

Environmental Questionnaire

**Phase I Environmental Site Assessment
Owner/Occupant Environmental Questionnaire**

Persons to be Questioned - The following questions should be asked of (1) the current owner of the property, (2) any major occupant of the property or, if the property does not have any major occupants, at least 10% of the occupants of the property, and (3) in addition to the current owner and the occupants identified in (2), any occupant likely to be using, treating, generating, storing or disposing of hazardous substances or petroleum products on or from the property. A major occupant is any occupant using at least 40% of the leasable area of the property or any anchor tenant when the property is a shopping center. In a multifamily property containing both residential and commercial uses, the preparer does not need to ask questions of the residential occupants.

(For any questions circled yes, please reference the appropriate question number(s) and explain as thoroughly as possible on the attached note pages following this questionnaire. If any additional information not covered in the following questions is known about the property or any adjoining property pertaining to hazardous substances and/or petroleum products, also include this on the note pages following this questionnaire.)

Definitions:

Property: The real property including buildings, improvements located on the property and affixed to the land. In this case, the property is:

**BMC Durfee High School
360 Elsbree Street
Fall River, MA 02720**

Adjoining Properties: Any real property or properties the border of which is contiguous with that of the property, or that would be contiguous with that of the property but for a street, road, or other public thoroughfare separating them.

Please list all adjoining properties on the attached notes pages.

Owner, Occupant and Site Visit Inquiry

1a. To your knowledge, is the property used for an industrial use?

Yes

☒ No

1b. To your knowledge, is any adjoining property used for an industrial use?

Yes

☒ No

2a. Have you seen evidence or do you have any prior knowledge that the property has been used for an industrial use in the past?

Yes

☒ No

- 2b. Have you seen evidence or do you have any prior knowledge that any adjoining property has been used for an industrial use in the past?

Yes ☒ No

- 3a. To your knowledge, is the property currently or has the property in the past been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaner, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?

Yes ☒ No

- 3b. To your knowledge, is any adjoining property currently or has any adjoining property in the past been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaner, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?

Yes ☒ No

- 4a. To your knowledge, are there currently any uses of the property that involve petroleum products or other hazardous materials?

Yes ☒ No

- 4b. To your knowledge, have there been any past uses of the property that have involved petroleum products or other hazardous materials?

Yes ☒ No

- 4c. To your knowledge, are there currently any uses of the adjoining properties that involve petroleum products or hazardous materials?

Yes ☒ No

- 4d. To your knowledge, have there been any past uses of the adjoining properties that have involved petroleum products or hazardous materials?

Yes ☒ No

- 4e. To your knowledge, are there currently any uses in the surrounding area that involve petroleum products or hazardous materials?

Yes ☒ No

4f. To your knowledge, have there been any past uses in the surrounding area that have involved petroleum products or hazardous material?

Yes

☒ No

5a. To your knowledge, is the property currently or has it been in the past used as a legal or illegal solid waste disposal site, transfer station, or dumping area?

Yes

☒ No

6a. To your knowledge, are there currently any registered or unregistered storage tanks (above ground or below ground) located on the property?

Yes

☒ No

6b. Have you seen evidence or do you have any prior knowledge that there have been previously, any registered or unregistered storage tanks (above ground or below ground) located on the property?

Yes

☒ No

7a. To your knowledge, are there currently any registered or unregistered leaking storage tanks (above ground or below ground) located on the property?

Yes

☒ No

7b. Have you seen evidence or do you have any prior knowledge that there have been previously, any registered or unregistered leaking storage tanks (above ground or below ground) located on the property?

Yes

☒ No

8a. To your knowledge, are there currently any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?

Yes

☒ No

8b. Have you seen evidence or do you have any prior knowledge that there have been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?

Yes

☒ No

- 9a. Have you ever experienced any strong, pungent, or noxious odors emanating from the property?
- Yes ☒ No
- 10a. Have you seen evidence or do you have any prior knowledge of any pools of liquid, including standing water on the property, that may be or may contain petroleum products or hazardous materials?
- Yes ☒ No
- 11a. To your knowledge, are there currently any industrial drums (typically 55 gal. (208 L)) or containers of chemicals located on the property or at the facility?
- Yes ☒ No
- 11b. Have you seen evidence or do you have any prior knowledge that there have been previously any industrial drums (typically 55 gal. (208 L)) or containers of chemicals located on the property or at the facility?
- Yes ☒ No
- 12a. To your knowledge, are there currently any damaged or discarded automobile or industrial batteries, pesticides, paints, or other chemicals in individual containers of greater than 5 gal. (19 L) in volume or 50 gal. (190 L) in the aggregate, stored on or used at the property or the facility?
- Yes ☒ No
- 12b. Have you seen evidence or do you have any prior knowledge that there have been previously any damaged or discarded automobile or industrial batteries, pesticides, paints, or other chemicals in individual containers of greater than 5 gal. (19 L) in volume or 50 gal. (190 L) in the aggregate, stored on or used at the property or at the facility?
- Yes ☒ No
- 13a. Have you seen evidence or do you have any prior knowledge that any hazardous substances or petroleum products, unidentified waste materials, unidentified substance containers, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the property?
- Yes ☒ No

- 14a. Have you seen evidence or do you have any prior knowledge that fill dirt that has originated from an unknown origin or a contaminated site, has been brought onto the property?

Yes ☒ No

- 15a. To your knowledge, is there or has there been in the past a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCB's located on the property?

Yes ☒ No

- 16a. To your knowledge, are there currently any pits, ponds, or lagoons located on the property in connection with waste treatment or waste disposal?

Yes ☒ No

- 16b. Have you seen evidence or do you have any prior knowledge that there have been previously, any pits, ponds, or lagoons located on the property in connection with waste treatment or waste disposal?

Yes ☒ No

- 17a. To your knowledge, is there currently any stained soil or pavement on the property?

Yes ☒ No

- 17b. Have you seen evidence or do you have any prior knowledge that there has been previously any stained soil or pavement on the property?

Yes ☒ No

- 18a. Have you observed or do you have prior knowledge that there has been distressed vegetation on the property, other than for lack of water?

Yes ☒ No

- 19a. To your knowledge, does the property discharge wastewater, other than stormwater, into a sanitary sewer system or a combined sanitary/storm sewer system?

Yes ☒ No

20a. To your knowledge, is the property currently or has the property been in the past, served by any private wells, non-public water systems, or dry wells?

Yes

☒ No

20b. If the property is currently served by a private well or non-public water system or has been in the past, have you seen evidence or do you have prior knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system?

Yes

☒ No

20c. If the property is served by a private well or non-public water system or has been in the past, have you seen evidence or do you have prior knowledge that the well has been designated as contaminated by any government environmental/health agency?

Yes

☒ No

21a. To your knowledge, are there currently or have there been in the past, any septic systems or cesspools located on the property?

Yes

☒ No

22a. To your knowledge, are there currently any drains, flooring, or walls located within any facility located on the property that are stained by substances other than water or are emitting foul odors?

Yes

☒ No

22b. Have you seen evidence or do you have any prior knowledge that there have been previously, any drains, flooring, or walls located within any facility located on the property that have been stained by substances other than water or have emitted foul odors?

Yes

☒ No

23a. Do you know what types of utilities are on the property (e.g., electric-above/under ground, gas, etc...)?

☒ Yes

No

24a. Do you know what types of heating/cooling systems are on property?

☒ Yes

No

- 25a. To your knowledge, has the owner or occupant of the property been informed of the current existence of hazardous substances or petroleum products with respect to the property or any facility located on the property?

Yes

☒ No

- 25b. To your knowledge, has the owner or occupant of the property been informed of the past existence of hazardous substances or petroleum products with respect to the property or any facility located on the property?

Yes

☒ No

- 25c. To your knowledge, has the owner or occupant of the property been informed of the current existence of environmental violations with respect to the property or any facility located on the property?

Yes

☒ No

- 25d. To your knowledge, has the owner or occupant of the property been informed of the past existence of environmental violations with respect to the property or any facility located on the property?

Yes

☒ No

- 26a. To your knowledge, does the owner or occupant of the property have any knowledge of any environmental site assessment of the property or any facilities located on the property that indicated the presence of hazardous substances or petroleum products on, or contamination of, the property or recommended further assessment of the property?

Yes

☒ No

- 27a. To your knowledge, does the owner or occupant of the property have any knowledge of environmental liens or governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property?

Yes

☒ No

- 28a. To your knowledge, does the owner or occupant of the property know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any hazardous substance or petroleum products involving the property by any owner or occupant of the property?

Yes

☒ No

**Re: Preliminary Subsurface Data Review
Proposed B.M.C. Durfee High School
Fall River, Massachusetts
LGCI Project No. 1712**

Dear Mr. Randall:

Lahlaf Geotechnical Consulting, Inc. (LGCI) has completed a preliminary review of the available subsurface data for the proposed B.M.C. Durfee High School in Fall River, Massachusetts. Our services were performed in general accordance with our proposal No. 17004 dated February 10, 2017.

This letter includes a summary of our field observations, a description of the historic maps we reviewed, a summary of the subsurface data we reviewed, our opinion about possible foundation issues during construction, and our recommendations for subsurface explorations. Please note that the review of available information summarized in this letter is not a substitute for a subsurface exploration program. The information gathered as part of this review may be incomplete and the recommendations derived therefrom are at best preliminary in nature and must be confirmed with actual subsurface explorations, laboratory testing, and geotechnical analyses.

Reviewed Documents

LGCI reviewed the following documents:

- “Surficial Geologic Map of the Fall River Quadrangle, Massachusetts,” prepared by Stone, B.D., Stone, J.R., DiGiacomo-Cohen, M.L., and Kincare, K.A. for the U.S. Geological Survey, Open-File Report 2006-1260-F (2011).
- Historic topographic maps of Fall River from <https://ngmdb.usgs.gov>.
- Geotechnical letter report titled: “Durfee High School Athletic Complex, 360 Elsbree Street, Fall River, Massachusetts,” (Athletic Field Report) prepared by MGA Inc. and dated December 2005.

**Preliminary Subsurface Data Review
Proposed B.M.C. Durfee High School
Fall River, Massachusetts
LGCI Project No. 1712**

- Drawing titled: “Proposed Site Plan, Fall River High School, Elsbree Street, Fall River, Massachusetts,” (Site Plan) prepared by Robert Charles Associates Inc. and dated May 4, 1973.
- Undated excerpts from a report titled: “Durfee High School, Athletic Campus Master Plan, Fall River, MA,” prepared by Gale Associates.
- MS Word document titled: “Durfee Sites Analysis,” provided to us by Ai3 Architects, LLC by e-mail on January 17, 2017.

Site Location and Description

We understand that Ai3 Architects, LLC (Ai3) was selected to conduct a feasibility study for the proposed B.M.C. Durfee High School. The existing high school is located at 360 Elsbree Street in Fall River, Massachusetts as shown in Figure 1. The site is bordered by Elsbree Street on the eastern side; by private properties and Langley Street on the northern side; by private residential properties; the Tansey Elementary School, and Ray Street on the western side, and by residential properties and the Spencer Border Elementary School on the southern side.

We understand that the existing school was opened in 1978. The existing school is comprised of several one- to three-story buildings. The site is about 68.9 acres in size and is occupied by the existing school buildings, athletic fields, and parking lots and driveways. The existing athletic fields, located on the northern side of the site, include a track and field, a football field, tennis courts, and three (3) softball/baseball fields. Based on the Durfee Sites Analysis, the existing grades at the site drop from about El. 230 feet near the southwestern corner to about El. 150 feet along the eastern boundary of the site. These grades are consistent with those shown on the Site Plan.

We understand that the area near the northeastern corner of the site is a wetland. The Durfee Sites Analysis document indicated that a portion of the site is within a 200 foot riverfront buffer zone and a 100 foot wetland buffer zone.

We understand that the existing athletic fields were constructed after 2005.

Project Understanding

Our understanding of the proposed project is based on our discussions with Ai3 and on information provided to us during our January 24, 2017 meeting. At this time, it is not known whether portions of the existing high school will be demolished to make space for new additions, or whether the existing high school will be entirely replaced. We understand that the existing field house and possibly the southernmost wing of the existing building may remain even if the

**Preliminary Subsurface Data Review
Proposed B.M.C. Durfee High School
Fall River, Massachusetts
LGCI Project No. 1712**

existing high school is entirely replaced. We understand that if the existing high school is replaced, the proposed building will likely be located in the existing athletic fields and that the existing track and field may be kept or slightly reconfigured.

Field Observations

An LGCI representative attended a meeting at the site with representatives of Ai3, Left Field LLC, the Owner's Project Manager (OPM), the City of Fall River, Pare, the project civil engineer, and Birchwood Design Group (Birchwood), the project landscape architect on January 24, 2017.

Below is a summary of information we obtained during our January 24 meeting as well as a brief description of our field observations from our January 24 visit as well as our previous site walk-through visit we performed as part of the briefing for the proposed high school in 2016.

- LGCI observed surficial boulders in the wooded area near the parking lot strip off of Elsbree Street.
- LGCI did not observe cracks in the existing buildings during our site visit.
- Ai3 indicated to us that rock was blasted during the construction of the existing school.
- The representative of the City indicated to us that during construction of the athletic fields, nested large boulders, buried in the existing fill, were encountered in many areas.
- The representative of Birchwood indicated that the football field is generally saturated following precipitation events. The representative of Pare reported that school maintenance staff indicated to Pare that the ground surface in the field remains wet several days after precipitation events. He indicated that standing water pockets can be observed in the baseball/softball fields, evidencing poor drainage of the fields and the possible presence of shallow groundwater due to the proximity to wetlands. The representative further indicated that during heavy rain, the synthetic turf lifts at several locations.
- The representative of the City indicated that sinkholes often form in the athletic fields and are patched as part of field maintenance.
- The representative of the City indicated to us that, reportedly, a stream used to run across the site before the site grades were reconfigured to the current condition.

Summary of Existing Subsurface Data

Surficial Geologic Map – LGCI reviewed a surficial geologic map titled: “Surficial Geologic Map of the Norton-Manomet-Westport-Sconticut Neck 23-Quadrangle Area in Southeast Massachusetts,” prepared by Stone, B.D., Stone, J.R., DiGiacomo-Cohen, M.L., and Kincare, K.A., for the U.S. Geological Survey (Open-File Report 2006–1260–F, 2011). A portion of the surficial geologic map near the site is shown in Figure 2.

**Preliminary Subsurface Data Review
Proposed B.M.C. Durfee High School
Fall River, Massachusetts
LGCI Project No. 1712**

The surficial geologic map indicates that the subsurface conditions within and in the general vicinity of the site consist of coarse deposits near the center and northern sides of the site, i.e., in the area of the existing athletic fields, and thin till on the southern side of the site, i.e., within and near the footprint of the existing buildings.

The coarse deposits consist of gravel deposits that contain sand, cobbles, and boulders. These deposits also include sand and gravel and sand deposits. The finer (sand) deposits may contain fines materials, including fine sand, silt, and clay. The thin till consists of a matrix of sand, some silt and little clay and contains scattered gravel clasts and a few large boulders. The surficial geologic map indicated that the till is typically 10 to 15 feet thick, indicating shallow rock.

Previous Borings – The Athletic Field Report contained the logs of fifteen (15) borings advanced in what is currently athletic fields. The borings extended to depths ranging between 2.5 and 20.5 feet with most borings extending deeper than 10 feet beneath the ground surface. The logs of these borings and a boring location plan are included in Attachment A.

The previous borings indicated topsoil, overlying 2.5 to 16 feet of fill, overlying natural glacial till. Based on the Standard Penetration Test (SPT) N-values, the existing fill was described as loose to very dense. We believe that the high SPT N-values were caused by obstructions in the fill and do not reflect the true density of the fill. The fill contained up to 25 percent organics and a large number of boulders. The boulders were described as fragmented and were reported to have possibly resulted from blasting at the site during the former development of the site.

The previous borings indicated refusal in six (6) of the fifteen (15) borings on rock or boulders.

The previous borings indicated that the groundwater levels during drilling ranged between 3.8 and 11 feet beneath the ground surface with most levels shallower than 7 feet.

Review of Historic Maps

To explore for the possible reasons that buried boulders exist in the existing athletic fields, LGCI reviewed historic topographic maps of the site. We reviewed topographic maps from 1985, 1979, 1967, 1949, 1944, and 1893 and we included portions of the maps in figures 3 to 8, respectively. Below are our observations based on our review of these historic maps.

- The historic topographic maps show that the site grades have generally changed very little since 1893 and that, other than within the existing building footprint, no substantial change in grade occurred as a result of the construction of the existing school in 1970s.
- The 1944 and 1949 maps, i.e., Figures 7 and 6, respectively, show two streams flowing across the site: one stream near the northeast corner and one stream near the center of the site in what is currently athletic fields. The historic maps subsequent to 1949 show the stream

**Preliminary Subsurface Data Review
Proposed B.M.C. Durfee High School
Fall River, Massachusetts
LGCI Project No. 1712**

near the northeastern corner but not the one near the center, indicating that the site topography was altered.

- In conjunction with the stream near the center no longer existing near the center of the site, the historic topographic maps starting from 1967, i.e., Figures 3, 4, and 5, show a gravel pit near the center of the site in what is currently athletic fields. Figures 5 and 3 indicate that the site grades appear to have been slightly altered between 1967 and 1985, respectively. The changes are possibly related to and consistent with the operations of a gravel pit. Please note that the actual date of the alteration may not correspond to the dates of the topographic maps as the publications of the maps may lag the actual changes in topography.

Evaluation

Based on our review of the existing subsurface information and the historic topographic maps, we believe that the existing fill encountered in the borings formerly advanced by others within the area of the existing athletic fields was placed subsequent to the end of the gravel pit operations in that part of the site. We believe that the boulders encountered in the fill may have resulted from blasting at the site and also may have been boulders that were screened from the gravel mined from the gravel pit. The presence of organic soil and boulders in the fill is typical of fill placed in closed gravel pits. In fact, the existing fill may contain logs and roots balls often found in fill placed in former gravel pits.

With regard to blasting, the comparison of the grades before and after the construction of the existing high school buildings shows that the grades have changed very slightly. Therefore, we believe that rock blasting occurred only within the footprint of the existing buildings.

Recommendations

In consideration of the information summarized above, we would like to make the following observations and/or recommendations.

- Rock may be shallow on the southern side of the site near the existing buildings. Accordingly, if the proposed construction includes additions near the existing buildings, these will likely require rock removal.
- Small rock quantities could be removed using percussion hammers. However, large quantities of rock removal would require rock blasting.
- Rock blasting near existing buildings should be performed in a controlled manner and would require a thorough pre-blast survey of the existing school buildings as well as buildings within a minimum of 250 feet from the nearest blasting location.
- Depending on their finished floor elevations (FFE), the proposed additions may require underpinning of the existing buildings.

**Preliminary Subsurface Data Review
Proposed B.M.C. Durfee High School
Fall River, Massachusetts
LGCI Project No. 1712**

- If additions or a proposed building are constructed within the existing athletic fields, the existing fill would need to be entirely removed from within the proposed buildings and over an area extending at least 10 feet beyond the limits of the proposed building on all sides.
- Based on the description of the existing fill containing up to 25 percent organics, it does not appear that the existing fill could be reused. However, the cobbles and boulders in the existing fill could be screened and crushed with onsite or imported soil free of organics to produce material that can be reused as backfill.
- Based on the observation of wet soils in the existing athletic fields, we recommend that the design of proposed buildings incorporate higher grades to bring the FFEs above the groundwater. We also recommend that proposed athletic fields be designed and constructed with free draining material and suitable drainage to maintain dry useable fields.
- To further explore the extent and quality of the existing fill, we recommend a subsurface exploration program during the schematic design (SD) phase consisting of borings and test pits. As part of the same proposal under which we performed this work, LGCI proposed performing soil borings and test pits at the site. We understand that these explorations will be performed during the summer when the school is not in session.

Limitations

Our letter is based on project information provided to us at the time of this letter. If changes to the type, size, and location of the proposed structures or to the site grading are made, the recommendations contained in this letter shall not be considered valid unless the changes are reviewed and the conclusions and recommendations modified in writing by LGCI. LGCI cannot accept responsibility for designs based solely on these preliminary recommendations.

It is not part of our scope to perform a more detailed site history; therefore, we have not explored for or researched the locations of buried utilities or other structures in the area of the proposed construction. Our scope did not include environmental services or services related to moisture, mold, or other biological contaminants in or around the site.

The recommendations in this letter are based in part on the data obtained from the review of existing subsurface data. The recommendations contained in this letter are at best preliminary in nature and must be confirmed with actual subsurface explorations, laboratory testing, and geotechnical analyses

Our letter has been prepared in accordance with generally accepted engineering practices and in accordance with the terms and conditions set forth in our agreement. No other warranty, expressed or implied, is made. This report has been prepared for the exclusive use of Ai3 Architects, LLC for the specific application to the proposed B.M.C. Durfee High School in Fall River, Massachusetts as conceived at this time.

**Preliminary Subsurface Data Review
Proposed B.M.C. Durfee High School
Fall River, Massachusetts
LGCI Project No. 1712**

If you have any questions or need further assistance, please contact us at (978) 330-5912.

Very truly yours,

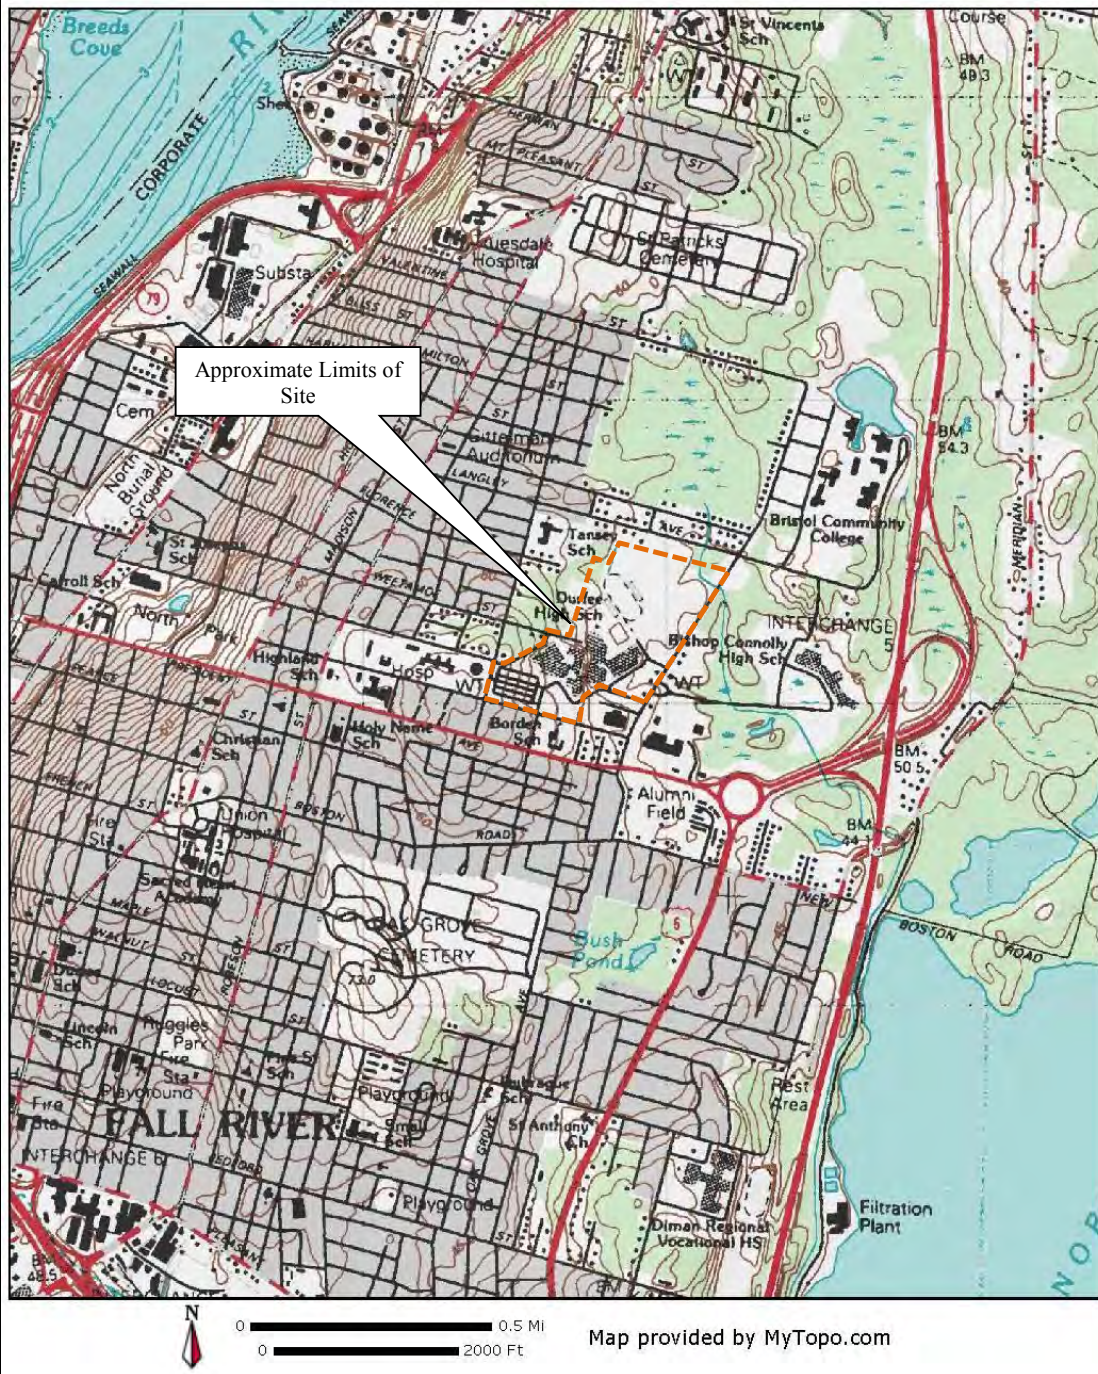

Lahlaf Geotechnical Consulting, Inc.

Abdelmadjid M. Lahlaf, Ph.D., P.E.
Principal Engineer

March 2017

Coarse deposits include gravel deposits composed of at least 50 percent gravel-size clasts; cobbles and boulders predominate; minor amounts of sand occur within gravel beds, and sand comprises few separate layers. Gravel layers generally are poorly sorted, and bedding commonly is distorted and faulted due to postdepositional collapse related to melting of ice. Sand and gravel deposits occur as mixtures of gravel and sand within individual layers and as layers of sand alternating with layers of gravel. Sand and gravel layers generally range from 25 to 50 percent gravel particles and from 50 to 75 percent sand particles. Layers are well to poorly sorted; bedding may be distorted and faulted due to postdepositional collapse. Sand deposits are composed mainly of very coarse to fine sand, commonly in well-sorted layers. Coarser layers may contain up to 25 percent gravel particles, generally granules and pebbles; finer layers may contain some very fine sand, silt, and clay.

Thin till—Nonsorted, nonstratified matrix of sand, some silt, and little clay containing scattered gravel clasts and few large boulders; predominantly upper till of the last glaciation; loose to moderately compact, generally sandy, commonly stony. Till is mapped where it is generally less than 10 to 15 ft thick including areas of shallow bedrock. Two facies are present in some places: a looser, coarser grained ablation facies, melted out from supraglacial position; and an underlying more compact, finer grained lodgement facies deposited subglacially. Both ablation and lodgement facies of upper till are sandy and stony and are derived from coarse-grained crystalline rocks. Subsurface till overlies fresh, nonweathered bedrock; this basal till varies in known thickness from <5 to >50 ft (Williams and Willey, 1973;

Williams and Tasker, 1974; Hansen and Lapham, 1992; Masterson and others, 1997). Till may overlie older Pleistocene deposits locally.

RE: Subsurface Conditions Summary Letter-Durfee High School Athletic Complex, Fall River, MA.

Dear Paul,

McArdle Gannon Associates, Inc. (MGA) is pleased to present the results of our subsurface explorations performed for the referenced project. Our objective has been to assess the general subsurface soil, rock and groundwater conditions within the proposed stadium, pavement, and athletic field footprints and to provide a summary of the subsurface conditions encountered. Our studies have been performed in accordance with our proposal to Gale Associates, Inc., dated November 7, 2005 and are subject to the Statement of Limitations attached as Appendix A.

SITE AND PROJECT DESCRIPTION

The Durfee High School is located at 360 Elsbree Street in Fall River, Massachusetts. An existing grassed football field (with grandstands) along with five athletic fields, tennis courts and appurtenant structures also exist at the site. According to the "Existing Conditions Plan" prepared by Gale Associates, Inc. for the project, the site topography generally slopes downward from west (El. 186± feet) to east (El. 152± feet). The low point of the site consists of wetlands, located in the northeastern corner of the property.

We understand that the proposed redevelopment includes the construction of a new football stadium, concession building, along with new athletic fields, expanded parking and paved access roads. The areas of development are located just north and east of the existing school and are currently occupied by athletic fields, parking lots and open fields.

SUBSURFACE EXPLORATIONS

A subsurface exploration program consisting of 15 soil test borings was completed as part of this study. The test borings were conducted at the site between November 9 and 11, 2005 by Soil Exploration Corporation of Leominster, Massachusetts under the full-time observation of MGA. Borings B-1(MW) through B-3(MW) were performed around the existing pool building, borings B-4(MW), B-9, B-10, B-11, and B-12 within the proposed football stadium and borings B-5(MW), B-6(MW), B-7, B-8, and B-13 through B-15 within the proposed athletic fields and pavement areas of the site.

The borings were advanced utilizing hollow stem augers to depths ranging from about 2.5± (B-13) to 20.5± (B-7) feet below existing ground surface and were terminated in natural soils or where “refusal” to further penetration upon possible bedrock or large boulders was encountered. “Refusal” to further penetration upon possible bedrock or large boulders was encountered between depths of about 2.5± to 17± feet below existing ground surface elevations at the locations of borings B-1, B-2, B-3, B-8, B-12, and B-13.

Split spoon sampling and Standard Penetration Testing was generally performed at approximate 5 foot intervals in each borehole. The penetration testing and sampling was performed by driving a standard split spoon sampler a distance of 18 or 24 inches (or to refusal) at each sampling depth utilizing a 140 pound safety hammer falling a distance of 30 inches. The number of hammer blows required to drive the sampler in 6 inch increments is recorded on the boring logs attached in Appendix B.

The soil samples retrieved in the split spoon sampler during each SPT were visually described in the field by MGA using Burmister soil descriptions. It should be recognized that the inside diameter of the split spoon sampler is 1.4± inches. Therefore, soil samples obtained via Standard Penetration Testing do not account for soil fractions in excess of about 1.4± inches in diameter, which may be present in any given strata.

Groundwater monitoring wells were also installed as part of our subsurface explorations. Two-inch inside diameter PVC monitoring wells were installed at test borings B-1 through B-6. Wells were set at depths between about 10± to 17± feet with 7± to 10± feet of slotted screen and 3 to 7± feet of solid riser, extending to the ground surface. Road boxes were installed at each monitoring well and set in concrete, flush with the ground surface. Refer to the boring logs for well schematic and construction details.

The exploration locations are shown approximately in Figure 1. The exploration locations for our study were determined in the field by line of sight, pacing and tape measurement from existing site features and should therefore be considered accurate to the degree implied by the methods used.

In addition, ground surface elevations shown on the attached test boring logs were estimated from ground surface contours on the referenced plan. Therefore, the elevations shown on the attached logs, as well as discussed throughout the report, should also be considered approximate.

SUBSURFACE SOIL AND GROUNDWATER CONDITIONS

The general subsurface profile at the site consists of surficial topsoil and bouldery fill deposits underlain by natural glacial till soils. Indications of a possible bedrock surface were encountered at depths of 2.5± to 17.0± feet below the existing ground surface. Groundwater was typically encountered between Elevations 166± and 148± feet. A general description of the individual strata encountered is described below. Refer to the attached test boring logs for additional information.

Topsoil Fill

A distinctive topsoil fill layer was encountered in the majority of the subsurface explorations performed within the existing playing fields. The topsoil fill was assessed to be about 0.5± to 1.0± feet in thickness and generally consisted of a dark brown fine to coarse sand and silt with approximately 15 to 35 percent fine to coarse gravel and less than 10 percent roots.

Existing Bouldery Fill

An apparent artificially placed bouldery fill deposit was encountered directly beneath the existing topsoil fill and existing pavement at the site to depths of about 3 to 16 feet below existing grades with the thicker fills observed along the central portions of the existing grassed football and soccer fields (see borings B-7, B-9, and B-10) and around the existing pool building. The samples of fill retrieved in the split spoon during the Standard Penetration Testing generally consisted of a loose to very dense tan-brown to gray-brown fine to medium sand with about 20 to 35 percent fine to coarse gravel and 15 to 25 percent silt. Up to 25 percent organic matter was encountered within the fill in a limited number of the borings (B-10 and B-11). The organic matter consisted primarily of organic silt and peat mixed within the fill matrix.

The fill described above appeared to contain a significant quantity of what appear to be fragmented boulders and cobbles (possible blastrock fragments) which were encountered from about 1 to 16 feet below the existing ground surface. This is based upon our observation of the spoil from the augers and the observed difficulties advancing the augers through the fill. These deposits may be associated with the former development activities at the site as some blasting activities are reported to have occurred for construction of the existing school building. As a result of this observation, the fill should be anticipated to contain a significant amount of cobble and boulder size fragments.

Natural Glacial Till

A natural glacial till deposit exists beneath the existing bouldery fill deposit described above. The till is generally classified as medium dense to very dense as defined by the results of the Standard Penetration Testing. This deposit consists of a heterogeneous mixture of sand, gravel, and silt in various proportions. Typically, this deposit consists primarily of fine to medium sand with 20 to 30 percent silt and 10 to 30 percent fine to coarse gravel. However, at some locations, the silt content of this deposit was observed to be up to about 40 percent.

Numerous cobbles and boulders also appear to be present in the glacial till based upon the difficulty advancing the augers and refusal to further penetration with the augers.

Refusal/Bedrock

Refusal to further penetration by the augers and/or split spoon possibly on either large boulders or bedrock was encountered at depths varying from about $2.5\pm$ to $17\pm$ feet below the existing ground surface at the locations of borings B-1, B-2, B-3, B-8, B-12, and B-13 performed for this study. These depths roughly correspond to Elevations varying from about $147\pm$ to $142\pm$ around the existing pool building, $144\pm$ at boring B-8, and $166\pm$ at the location of boring B-13. However, it was difficult to distinguish between bedrock and large boulders with the equipment used. As a result, the depths to bedrock may differ from those noted on the logs.

Groundwater

Groundwater levels for this study were measured in the completed boreholes at the times and under the conditions noted on the logs. Observed groundwater levels indicate the groundwater table to be located about $3.8\pm$ to $11\pm$ feet below the existing ground surface during drilling. These depths roughly correspond to Elevations between about $166\pm$ and $148\pm$.

Stabilized groundwater levels recorded in the observation wells installed at the location of borings B-1 through B-6, which is considered more representative than those made in the boreholes upon completion, indicates the groundwater table to be located between about $3.8\pm$ and $10.6\pm$ feet below the existing ground surface at the time and in the locations the measurements were made. These depths roughly correspond to Elevations of about $152\pm$ to $148\pm$ around the existing pool building and between Elevations $166\pm$ to $149\pm$ elsewhere. Groundwater flow direction appears to be generally in an east direction across the site.

It should be expected that groundwater levels at the site will fluctuate due to variations in temperature, rainfall, and other factors that are different than those occurring when our measurements were made. As a result, groundwater levels encountered thereafter may be different than those reported herein. During periods of heavy rainfall or snow melt, perched water within the glacial till or on top of the bedrock surface should also be anticipated as the surface water percolates through the more permeable zones and becomes trapped within the less permeable zones.

STATEMENT OF LIMITATIONS

Explorations

The analysis and recommendations submitted in this report are based in part upon the data obtained from subsurface explorations. The nature and extent of variations between these explorations may not become evident until construction. If variations then appear evident, it will be necessary to re-evaluate the recommendations of this report.

The stratification lines on the logs represent the approximate boundary between soil types and the transition may be gradual.

Water level readings have been made in the explorations at the time and under the conditions stated on the logs. This data has been reviewed and interpretations made in the text of this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall, temperature, and other factors that are different from the time the measurements were made.

Review

In the event that any change in the nature, design or location of the proposed structure are planned, the conclusions and recommendations contained in this report shall not be considered valid unless the changes are reviewed and conclusions of this report modified or verified in writing.

It is recommended that this firm be provided the opportunity for a general review of final design and specifications in order that earthwork recommendations may be properly interpreted and implemented in the design and specifications.

Construction

It is recommended that this firm be retained to provide soil engineering services during the construction phase of the work. This is to observe compliance with design concepts, specifications, and recommendations and to allow design changes in the event that subsurface conditions differ from those anticipated prior to start of construction.

Use of Report

This report has been prepared for the exclusive use of Gale Associates, Inc. for specific application to the Durfee High School Proposed Athletic Complex, 360 Elsbree Street, Fall River, Massachusetts, in accordance with generally accepted geotechnical engineering practices. No other warranty, expressed or implied, is made.

KEY TO SYMBOLS

Symbol Description

Symbol Description

Strata symbols

Bouldery Fill

Glacial Till

Topsoil

Paving

silica sand, no pipe
(end plug)

Soil Samplers

Split Spoon

Monitor Well Details

flush-mount
cover

protective casing
set in concrete

bentonite pellets

silica sand, blank PVC

slotted pipe w/ sand

endcap on pipe
packed in sand

assorted cuttings

Notes:

1. Test borings performed by Soil Exploration Corporation between November 9 and November 11, 2005.
2. Observed and Logged by McArdle Gannon Associates, Inc.
3. Elevations shown were estimated from ground surface contours shown on the "Existing Conditions Plan" provided by Gale Associates, Inc. drawing EC-1, undated.
